## KIT09002 M2.5 x 5mm Screws.

KIT 09002 was initially developed to be used with the ASN 17mm and / or the Pirelli 18.5mm end specific kits. At that time it was determined that the common component kit: KIT 09002 would not need to have any M2.5 x 5 mm screws included.

To fulfil the need for backward compatibility and to enable the use of Kit 09002 where previously a kit 09001 may have been specified, it has been found to be necessary to include 65 M2.5 x 5mm screws in all Kit 09002, this has taken effect from kit serial number 580 onwards.

Owners of Kit 09002 with serial numbers lower than 580, who require to use the kits for jointing end specific kits other than ASN 17mm or Pirelli 18.5mm, will be supplied on request a free issue pack of screws for each kit held.

To apply for the free issue packs of screws, please contact Jane Cross on 01245 702024 or Linda Sadler on 01245 702267, or Fax 01245 703051 quoting the serial numbers of the kits requiring update. Packs of screws will be provided free of charge.

## New Fusion Splicer Printer

KDD-SCS wish to advise jointing people that they are introducing a new digital printer for the Sumitomo Type 35SE UJ/UC Fusion Splicing Machine

The earlier printer model type was DPRS1T whereas the new printer is marked SDP - xxx (where xxx is the printer serial number).

Connections between the new printer and the Splicing Machine are the same as for the earlier type and the methods of use are almost identical. Each printer is supplied together with an operation manual. UJCM 025 will be reissued on the next UJ Explorer CD to include a description of the new printer.

Please contact Ken Smith if you require further information on this subject.
