KIT09002 Compatibility

During a recent design review, Global Marine Systems Ltd identified a minor kit upgrade that is required for certain ASN/Pirelli S560 and S280 End Specific Kits to be compatible with the new KIT09002 Common Components.

The upgrade comprises of replacing the existing King Wire Clamp Base with a new item. The new item has an additional radius to smooth the fibre path. Naturally, this upgrade will be provided free of charge.

IMPORTANT: This upgrade is required when using these kits in joints that include the Common Component Kit KIT09002 only and **not** KIT09001.

The ASN/Pirelli 21.5mm and S280 (18.5mm and 25mm) End Specific Kits that require this upgrade, when used with KIT09002 Common components, are shown in the table to the right:

If you need to upgrade any of the kits listed below, for use with Common Component Kit KIT09002, please advise Ken Smith at Global Marine Systems Ltd at the fax number or e-mail address at the foot of the page. He will need the following information to arrange the free upgrade:

- Full delivery address for the piece parts
- Contact name and telephone number at delivery address
- Kit Stock Numbers and Serial Numbers to be upgraded.
