KIT09002 Requires Upgrade.

The Universal Jointing common component KIT09002 was introduced to provide enhancements to the technology including fibre movement and hydrogen management.

In order to fulfil the need for backward compatibility and to enable the use of KIT09002 in all applications, where KIT09001 may have been previously specified, it is vitally important that end users are equipped with the latest upgrade.

Owners of KIT09002 with serial numbers less than 580 who require to use the kit for older cable designs without a loose tube must request a free issue upgrade pack for each KIT09002 held.

The upgrade pack consists of 65 M2.5 x 5mm screws to ensure the compatibility with all cable types.

This information was previously communicated in the earlier bulletin CSPB003 of 11/02/00.

To apply for your free issue upgrade packs, please contact:

Jane Cross, Customer support Executive

jane.cross@globalmarinesystems.com

or

Linda Sadler, Customer support Executive

linda.sadler@globalmarinesystems.com

Please provide the following information:

1. Serial numbers of kits requiring upgrade
2. Delivery address and contact information
