UJ Tool Kits Review.

The range of Universal Jointing Tool Kits supplied by Global Marine Systems has been fully updated.

The aim of the comprehensive review is to integrate newly qualified cables and to rationalise where appropriate; the total number of kits required.

In addition to the above, the kits now include such items as X-ray camera collets and mould inserts, although these items are still available separately on request.

New kit numbers have been introduced, in order to clearly distinguish between the revised and existing kits, as can be seen in the table opposite.

We will be pleased to accept orders for the new tools, which will be available for delivery from 1st March 2001.

Further details are available on our web site at www.ujuc.com
