Kits

All kits now have bar-coded labels affixed and are compatible with the Swift Scan bar-code reader.

A Feedback form is now being placed inside every kit to allow users to comment on Kit, Construction Manual and Operation Manual Content.

New!

Global Marine will shortly be offering a UJ/UQJ Spares Kit (KIT19000) which will contain a selection of commonly used components, including screws, O-rings, pins, clips, seals and link wires etc. It is hoped that the kit will be available in May 2002.

Documentation

Commencing with the March UJ/UQJ Explorer, all amendments to construction manuals will be highlighted by a vertical, red line in the left-hand margin. These will be removed when the document is again up-issued.

Tool Kit Bills of Materials are now included in the UJ/UQJ Explorer.

As construction manuals are up-issued, the old-style checksheets are being deleted from the back of the documents.

Please use the new generic checksheets, which are included on every Explorer in WORD & PDF format.
