

Universal Jointing Consortium

Bulletin Number: UJCB034

www.ujconsortium.com

Introduction of UQJ Common Component Kit – KIT30002

The UJ Consortium design and qualify the Universal Joint, Universal Coupler and the Universal Quick Joint.

The 3 jointing technologies follow a simple format. The *common inner joint parts* supplied in the **Common Components Kits**, the *outer protection parts* supplied in the **Outer Protection Kits** and the parts that are *specific to the cable type* and variant supplied in the **End Specific Kits**.

This bulletin is specific to the **Universal Quick Joint Common Component Kit – KIT30002**.

Since its inception the UQJ has been compatible with loose tubes cables, however there has been a trend for the designers to secure the fibers within the joint cavity and this has required the design and release of the **UQJ Common Component Kit - KIT30002**.

The new design features in this kit variant allows the design engineers to embrace the fiber restraining techniques previously design and qualified in the larger UJ thus providing to the customers designs that have proven to be reliable.

Note, when using the UQJ for Tyco Telecom SL12L cable types the KIT30002 must be used.

From the end of December 2008, KIT30000 and KIT30001 will no longer be supplied by the UJC, but customers owning stocks of these kits will be pleased to know that the UJC will continue to provide technical and training support until further notice.

For further information please contact the UJC.
