RE-ORGANISATION OF FIBRE SPLICING & TORQUE EQUIPMENT TOOL-KITS

The UJ Consortium would like to notify their customers of some major changes to the fibre splicing and torque equipment tool kits.

Torque Equipment

At present, the Torque Equipment Tool-Kit (KIT102AA) is designed for KIT09001 and KIT09002 use. As most new customers only require KIT09002 equipment, the UJC have created KIT140AA for KIT09002 use only. KIT102AA will still be available for customers who wish to repair both technologies.

Splicing Equipment

The existing Fibre Splicing Toolkit (KIT303AA) contains the UJS-S100R Splicer & toolkit, the Heated Die Elastomer Stripper, Fibre Proof Testing Equipment, Fibre Stripper and Splicing Table. As the majority of cables are now loose-tube, the requirement for Elastomer removal and proof testing has diminished and many customers only need to purchase the equipment necessary for loose-tube cables. The UJC will therefore be phasing out the Fibre Splicing Toolkit (KIT303AA) and customers will have the opportunity to purchase only the tooling that they require. The new arrangement for Fibre Splicing tooling will be:

UJS-S100R Fibre Splicer & Toolkit:	Kits K9 & K10 (already available separately)
Heated Die Elastomer Stripper:	Kit A6 (already available separately)
Heated Die Elastomer Stripper Spares:	Kit A7 (already available separately)
Fibre Proof Testing Kit	Kit A8 (already available separately)
Fibre Stripper PS02 (STR007PP)	Transferred to KIT301AA
Splicing Table (TBL009PP)	Discontinued. Replaced by TBL005PP

In addition, the Fume Extraction Equipment (KIT216AA) will be discontinued.

The above changes will take place on 1st December 2011.

If you have any queries concerning these changes, please contact the UJ Consortium Co-ordinator.
