Use of Most Up-to-Date C-SAMS Software

As the UJC continuously improves its products and services the written joint assembly manuals are updated on 'an as needed basis' and it is critical that the jointer uses the most recent manual for the task in hand.

The same applies to software used to interface with the UJ/UC molding equipment. It is important to emphasize the need to use the most recently issued software when undertaking molding operations.

For information only, the most up-to-date software versions currently are:

Version 6.3.6 for use with Windows7 / Office 2013 on a Controller having a Serial cable for connection to the laptop.

and

Version 7.0.1 for use with Windows7 / Office 2013 on a Controller having an Ethernet cable for connection to the laptop.

Please note: These versions are provided with the December 2015 UJ / UQJ Explorer release and may be updated further from time to time.

If you have any queries concerning these changes, please contact the UJ Consortium Co-ordinator.
