Engineering and qualification testing continues at a rapid pace to cope with demand for UC technologies on new cable types. The following listing is intended to show the general range of cables and housing types qualified with UC. There may be minor variations on cables or housing with similar descriptions, therefore advice should be sought from the UJ Consortium and/or the cable/housing manufacturer when purchasing or using UC for a specific application. Advice should also be sought if your requirement involves hydrogen management.

Click on the links below to view the qualified combinations. . .

- ASN Repeater Common Housing
- ASN R3 Repeater
- ASN Fibreglass Housing Repeater
