The Universal Joint/Coupling and Universal Quick Joint design methodology is to tailor the joint to a cable. Therefore there may be instances where a change to a cable's design, materials or manufacturing process makes an existing qualification invalid. It is therefore recommended that the customer obtains verification from the cable manufacturer or supplier, prior to purchasing, that the UJ/UC/UQJ qualification status of the cable to be supplied is still valid.

Note 1: Compatibility: We have received advice that it is now necessary on some browsers to click the 'Show All Content' button that displays at the bottom of the screen when this page is opened in order to view the selection facility.

Note 2: ASN Fiber Soft Seal Restraints: The UJ Consortium recommends users to consult the Cable System Maintenance Manual or to make contact with the UJ Consortium design authority to assess if a Fiber Soft Seal Restraint is required in any given joint combination.
